

SECURING SENSITIVE DATA ON HYBRID CLOUD: CHALLENGES AND BEST PRACTICES

Hybrid cloud deployment requires managing security across multiple environments, making data protection a challenging exercise.

API attacks experienced a staggering **168.8%** increase in the first half of 2022 compared to the same period in 2021.

Unstructured data represents **80%** of all new enterprise data, and it's growing 3X faster than structured data.

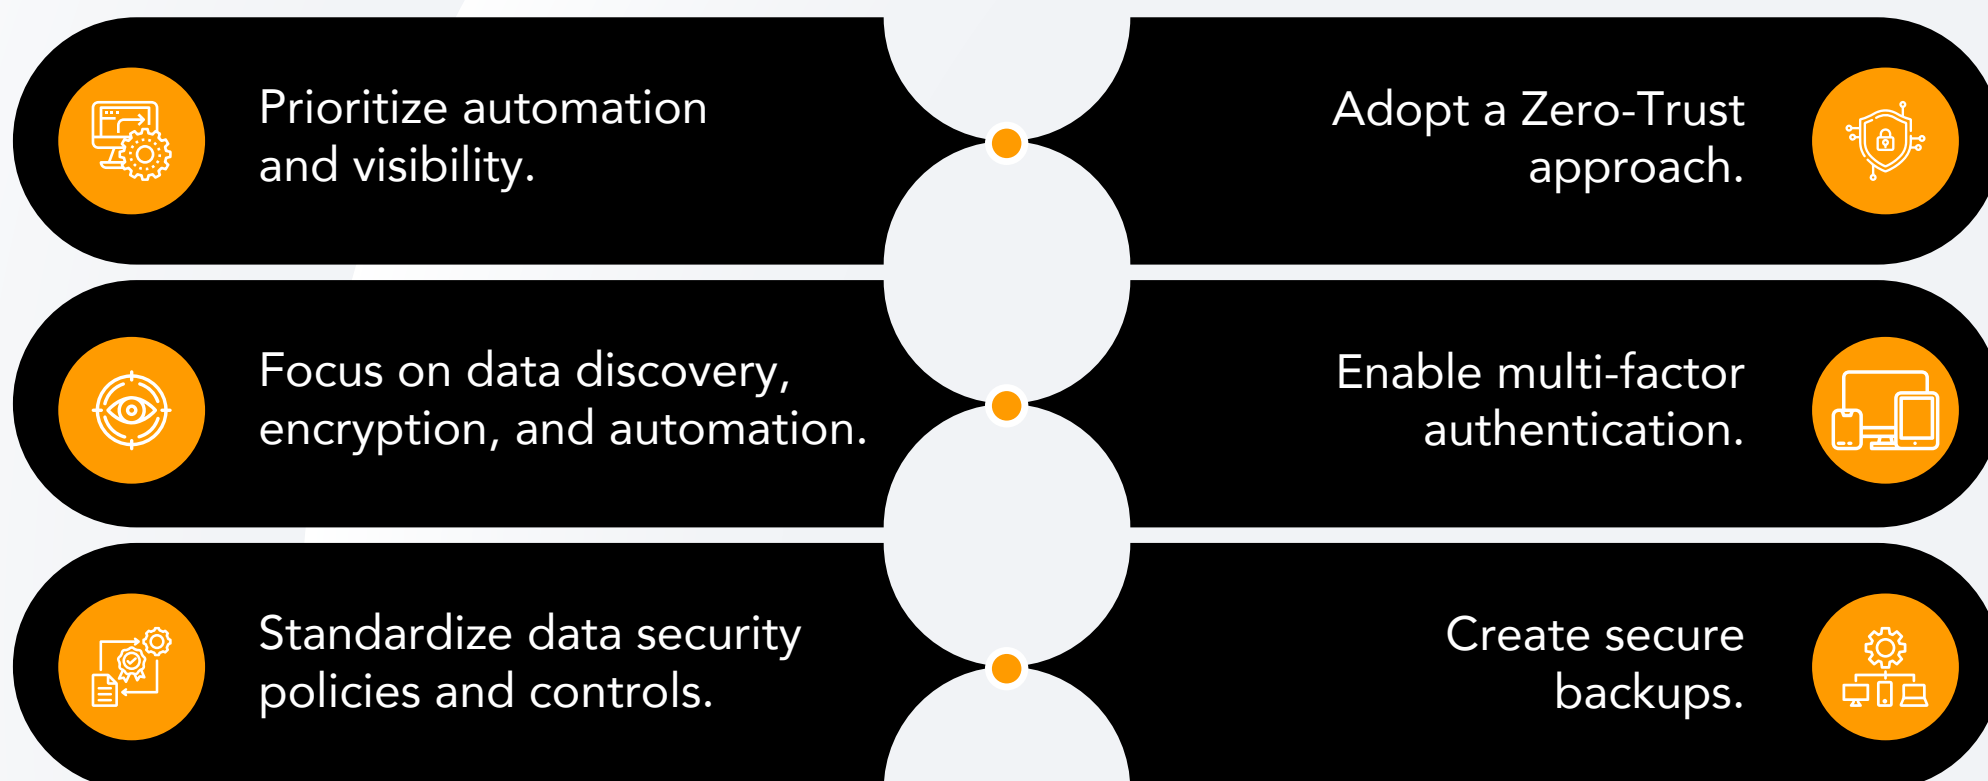

Over **70%** of organizations reported a cloud skills gap in their organizations.

Despite 82% of IT leaders worldwide adopting hybrid cloud, developing an effective data security strategy remains a challenge.

Key threat vectors in hybrid cloud

Playing the game of whack-a-mole - 6 Best Practices to beef up cloud defenses
